DATASHEET

MERINO SOCKS

All protective areas located on the leg, Achilles tendon, heel, ankle, instep, toe area, are designed to reduce pressure, friction and help to prevent blisters.

- 1** Protection located on the instep is designed to reduce compression generated by the tongue of the shoe.
- 2** The elastic belt on the ankle provides protection from abrasion on the most stressed part of the foot. The same elastic belt provides more stability to the heel and Achilles tendon reducing blisters.
- 3** The soft and elastic band ensures comfort for all sizes.
- 4** The ergonomic insole (left and right) helps reduce compression increasing comfort. The insole is made of lightweight material. It dries out fast transporting sweat outwards keeping the skin dry.
- 5** The Leg portion of the sock is made of soft blended material combining natural properties of merino wool (comfort, warm and insulation) with tech properties of acrylic that tires out fast.

PART NUMBER: AP-CA/ME

FABRIC COMPOSITION: 29% ACRYLIC, 23% PES, 17% PA, 16% PP, 12% WOOL, 3% EA
